duolingo

Background

- PhD Applied Linguistics
- MFA Creative Writing
- Prior experience
 - ESL teacher
 - L2 teacher training
 - StoryCorps facilitator
- Prior research
 - lexical development
 - applied NLP
 - corpus linguistics

What I've Worked on at Duolingo

- English and Spanish courses
- Duolingo English Test
- Chatbots
- Tips and Smart Tips
- Spanish Podcast
- Audio Lessons
- Stories
- Managing others

Tips for Interviewing Well

- Frame your expertise broadly for non-academics
 - focus on broad expertise vs. deep
- Show that you are a clear, accessible, and succinct communicator
- Demonstrate that you are easy to work with
 - you accept feedback gracefully
 - you're willing to compromise
 - you know how to collaborate

TIP:
Be prepared to complete tasks prior to or during the interview

Frame the discussion
around what you do—
not what you study

duolingo

Skills to Highlight

- Research experience
- Problem-solving
- Project management
- Time management
- International experience
- People management
- Creativity
- Innovation
- Cross-functional collaboration
- Resilience to feedback

TIP:

Have one concrete example in mind for each so you can respond to questions like, “Tell us about a time when a project went wrong and you had to problem-solve...”

CONTINGENCY SLIDES

What's it like to work in
tech?

duolingo

Working in Tech

Working in tech is...

- Fast-paced
- Metrics driven
- Cross-functional
- Collaborative
- Did I say “fast-paced”?
- Full of AB testing
- Lucrative
- Horizontal
- Product-centered
- Design-centered

What skills do I need?

- Ability to communicate with non-experts
- Ability to communicate quickly and succinctly across modalities
- Product knowledge (can be developed)
- Well-roundedness
- Some coding would be nice
- Qualitative research can help as well!
- General awareness of tech communication (e.g., I live in Slack and Google Drive)
- Resilience

Where to start?

- Get a LinkedIn page
- Start investigating User Experience Research (UXR)
- Take a coding / computer science intro course (if only for the vocab)
 - e.g, pull request, deploying to staging, porting to mobile
- Look for internships
- Try to get informational interviews with folks who are already working in tech (consider UXR as well)
- Learn about different roles (e.g., wtf is a product manager?)
